

SVA Data Catalogue Volume 1

Abstract This document defines the data interfaces required by Supplier Volume Allocation under the BSC.

All of the interfaces are cross-referenced to the relevant Programme documents (Technical Specifications, BSC Procedures, Service Lines and BSC Service Lines) where the data flow and its usage were originally defined.

Document Reference Data Interfaces Used in the SVA Trading Arrangements

APPENDIX B: DATA INTERFACE DEFINITION

iv Change History

- Issue 1.0 First formal issue for NETA. This document is the ELEXON Data Interfaces document v5.0 plus all changes delivered by the Implementation of NETA within Stage 2 Project and has been re-badged for NETA.
- Issue 1.1 Incorporating changes required for NCR114 – Transfer of Metering Systems Between SMRS and CMRS.
- Issue 2.0 For approval by the Panel on 22 February 2001 (Panel paper 13/016).
- Issue 2.1 Changes as required for SIRs R1964, R2092, R2180, R2296, R2668, R2896, R2907, R2928, R3010 and R3011. Issued for combined peer and formal review.
- Issue 3.0 Approved by the Panel (P/15/013).
- Issue 3.2 Changes required for CP704, and internal database restructure.
- Issue 3.3 Changes required for CP690, UMS (Unmetered Supplier) Clarifications and Improvements.
- Issue 4.0 Changes required for Modification P30, availability of market information to BSC and non-BSC parties.
- Issue 4.1 Changes required for Modification P68 and CP760.
- Issue 5.0 Approved by SVG (SVG/21/259 and SVG/16/190).
- Issue 5.1 Changes for CP518, CP696, CP698, CP774, CP792, CP799, CP805 and CP914.
- Issue 6.0 Approved by SVG (SVG/22/275).
- Issue 7.0 Changes required for Modification P91 'Extension to Data Provided to the Transmission Company in the TUoS Report'. Approved by SVG (SVG/24/319).
- Issue 8.0 Changes required for Modification P88 'Introduction of obligations in relation to SVA Metering, Meter Operator Agents and Equipment Owners', CP861 and CP899. Approved by SVG (SVG/27/364), (SVG/25/345) and (SVG/25/342).
- Issue 9.0 Changes required for CP551 'Enduring Process to replace W006 – P0181 flow to SVAA'. Approved by SVG (SVG/29/387).
- Issue 10.0 Changes required for Modification P62 'Changes to Facilitate Competitive Supply on the Networks of New Licensed Distributors'. Approved by SVG (SVG/29/390).
- Issue 11.0 Changes required for the SVA August 03 Release. Approved by SVG (SVG/29/389, SVG/30/397).
- Issue 12.0 Changes required for Modification P81 'Removal of the Requirement for Half Hourly Metering on Third Party Generators at Domestic Premises'. Approved by SVG (SVG/31/414).
- Issue 13.0 Changes required for Modification P116 'Changes to Allow Line Loss Factor Data from BSC Website to be Used in Settlement'. Approved by SVG (SVG/33/447).
- Issue 14.0 Changes required for CP904, CP941, CP969, CP1003 and CP1004. Approved SVG (SVG/36/487).
- Issue 15.0 Changes required for Modification P99 'Changes to Accreditation, Entry Processes and the PARMS Serials and Standards resulting from the Performance Assurance Framework (PAF) Review (Phase 1)'. Approved by SVG (SVG/38/477).
- Issue 16.0 Changes required for CP820 'Enhancements to a number of Unmetered Supplies Processes'. Approved by SVG (SVG/40/005).
- Issue 17.0 Changes required for CP892 and CP947. Approved by SVG (SVG/43/003).
- Issue 18.0 Changes required for CP844 and CP942 for the SVA Feb 05 Release. Approved by SVG (SVG/47/004)

- Issue 19.0 Changes required for BETTA 6.3. Approved by SVG (SVG/48/004)
- Issue 20.0 Changes required for CP1057, CP1079, CP1080, CP1082 for the SVA June 05 Release.
Approved by SVG (SVG/51/004)
- Issue 21.0 Changes required for CP1036, CP1098, and CP1105 for the SVA November 05 Release.
Approved by SVG (SVG/56/004)
- Issue 22.0 Changes required for CP1093, CP1102, and CP1127 for the Feb 06 Release.
Approved by SVG (SVG/60/004)
- Issue 23.0 Changes required for CP1144 for the June 06 Release.
Approved by SVG (SVG/64/02)
- Issue 24.0 Changes required for P196, CP1155, CP1159 for the February 07 Release
Approved by SVG (SVG/70/01)
- Issue 25.0 Changes required for CP1173 and CP1181 for the June 2007 Release.
Approved by SVG (SVG/75/02)
- Issue 26.0 Changes required for P197 for the Release on 23rd August 2007.
Approved by SVG (SVG/76/02)
- Issue 27.0 Changes required for CP1200 and CP1210 for the November 2007 Release.
Approved by SVG (SVG/77/04 and SVG/79/02)
- Issue 28.0 Changes required for CP1208, CP1209 and CP1223 for the June 2008 Release.
Approved by SVG (SVG82/03 and SVG84/02)
- Issue 29.0 Changes required for CP1234 for the November 2008 Release.
Approved by SVG (SVG87/02)
- Issue 30.0 Changes required for CP1249, CP1259 and P222 for the June 2009 Release.
Approved by SVG (SVG94/02, SVG93/02 and SVG97/05)
- Issue 31.0 Changes required for CP1269 for the November 2009 Release
Approved by SVG (SVG97/01)
- Issue 32.0 Changes required for CP1295 for the February 2010 Release
Approved by SVG (SVG102/01)
- Issue 33.0 Changes required for CP1309 for the June 2010 Release
Approved by SVG (SVG105/02)
- Issue 34.0 Changes required for CP1334 for the June 2011 Release
Approved by SVG (SVG114/02)
- Issue 35.0 Changes required for CP1325, CP1334, CP1335 for the November 2011 Release
Approved by SVG (SVG127/13)
- Issue 36.0 Changes required for CP1347 for the February 2012 Release
Approved by SVG (SVG130/01)
- Issue 37.0 Changes required for ORD005: Electricity Market Reform (EMR), Effective from 1 August 2014 as Directed by the Secretary of State
- Issue 38.0 Changes required for CP1405 for the November 2014 Release
- Issue 39.0 Changes required for CP1395 for the February 2015 Release

Issue 40.0 Changes required for P300, P305 and CP1432 for the November 2015 Release
Issue 41.0 Changes required for CP1449 for the February 2016 Release
Issue 42.0 Changes required for P315 for the June 2016 Release
Issue 43.0 Additional changes required for P315 for the June 2016 Release
Issue 44.0 Changes required for P339 for the April 2017 Release and minor corrections for P300
Issue 45.0 Changes required for CP1469 for the June 2017 Release
Issue 46.0 Changes required for CP1484 for the November 2017 Release
Issue 47.0 Changes required for P348/349 for the February 2018 Release
Issue 48.0 Changes required for CP1495, CP1496 and CP1497 for November 2018 Release
Issue 49.0 Changes required for the P344 for February 2019 Release
Issue 50.0 Changes required for P369 for the March 2019 Release
Issue 51.0 Changes required for P367 for the June 2019 Release

v Changes Forecast

Future versions of this document will be issued in response to changes raised through the change control procedures.

1. INTRODUCTION

1.1. Purpose

This document defines the interfaces required by the ELEXON-delivered or certified applications and BSC Procedures, for communications between SVA data parties. It forms part of the "SVA Data Catalogue" as defined in Section O of the BSC.

All of the interfaces are cross-referenced to the relevant Programme documents (Technical Specifications, BSC Procedures and Service Lines) where the data flow and its usage were originally defined.

This is one of a set of five closely related Code Subsidiary Documents, the others being:

- SVA Data Catalogue Volume 2 (reference 1). Defines the data items included within the Data Interfaces specified in this document;
- CVA Data Catalogue (reference 2). Defines the data interfaces between BSC Agents and BSC Parties and Party Agents for all communications, other than SVA Communications, as set out in the BSC Section O;
- The BSC Reporting Catalogue (reference 3). Catalogues and provides further information on the contents of reports issued by the BSC Agents as defined in Section X Annex X-1 of the BSC;
- The BSC Communication Requirements Document (reference 4). Contains detailed requirements for sending and receiving communications between Parties and BSC Agents using one or more Communications Media.

This document is also closely related to the MRA Data Transfer Catalogue (reference 5), which details the definitions of all data flows and data items used over the Data Transfer Network.

1.2. Objective

It is the objective of this Data Interface definition to achieve benefits of efficiency and quality for users and application systems within Supplier Volume Allocation under the BSC. This requires that:

- data interface definitions are definitive, common, complete and consistent within the constraints of current scope;
- the Data Interface definition is available electronically to all users and is centrally managed.

1.3. Summary

Following this introductory section, section 2 of this document describes the conventions used in defining the physical files used to implement the SVA data interface requirements. Then section 3 provides a summary of instruction processing logic. The data interfaces within the scope of the document (see section 1.4) are then specified within the document appendices:

- Appendix A provides an index of data interfaces in ascending sequence of flow reference, along with the flow name, 'from' and 'to' participant, and source document.
- Appendix B provides a full definition of data interfaces identified in Appendix A in ascending alphabetic sequence of data flow name.

1.4. Scope

The scope of the interfaces defined in this document are those enabling the flow of data required for Supplier Volume Allocation as defined in paragraph 1.4 of Section O of the Balancing and Settlement Code.

It does not cover those interfaces:

- with external entities in the form of hard copy reports;

- which are manual inputs to systems - these (user interfaces) are specified in the relevant system specifications; or
- consisting of data items not required under the BSC.

Where a data interface is used by Settlement but defined within the Data Transfer Catalogue, this document will note the interface in Appendix A but will refer to the DTC for the full details of the definition.

1.5. Responsibilities

It is the responsibility of all SVA data parties to adopt the Data Interfaces. This will require the following:

- incorporating the Data Interfaces within their own area of responsibility. For example, this may occur during initial compliance or following authorised updates to the Data Interfaces;
- raising change requests to update the Data Interfaces. For example, changes to existing definitions or the addition of new data items as identified in their own area of responsibility.

It is the responsibility of the Data Interfaces owner to manage the Data Interfaces. This includes the following activities, which may be delegated:

- provide SVA data parties with shared access;
- make updates authorised by the change control procedure;
- fulfil the role of a Data Manager with responsibility for monitoring the use of standards, arbitration, general housekeeping, etc.

The current owner of the Data Interfaces is the ELEXON Design Authority.

2. APPROACH USED IN DATA INTERFACE DEFINITION

2.1. Introduction

Interface Definitions contained within this document are presented at Appendix B. This is preceded by general index of all interfaces required by Settlement, listed by Flow Number, Flow Name, From, To and Source Document, at Appendix A.

Each interface derives from a required flow of data specified in one or more of the BSC Procedures and/or one or more of the Technical Specifications for the ELEXON-developed applications. Interfaces are physically implemented as structured files comprising a number of records, each of which comprise one or more fields. The non-physical definition of the interface is termed a data flow. Data flows are comprised of data groups that are, themselves, comprised of data items.

2.2. Interface Definition

Each data flow in the catalogue is given a unique data flow name and a unique data flow reference. Data flow references are of the form Paaaa or Dnnnn¹.

Each data flow is further defined as having

- a version number²,
- details of the documents providing the source of the interface definition,
- data flow initiators and recipients,
- details of data requirements from BSCPs,
- a physical file specification

The following sections explain how to use and interpret the definitions.

2.3. Sources of Interface Definitions

The interface definitions are derived from BSC Procedures and the Technical Specifications for the ELEXON-developed applications. Each definition lists the relevant source documents together with each source's internal reference(s) for the interface and any variation in the name by which a data flow is known within that source document.

2.4. Data Flow Initiators and Recipients

Each interface definition includes the party initiating (from) and receiving (to) the communication for each occurrence of that interface specified in the source documents.

2.5. BSC Procedures Data Requirement

This section documents the required content of the data flow as defined in one or more of the BSC Procedures used in operating the Supplier Volume Allocation aspects of the BSC.

Where the BSC Procedures specify the structure of a data flow this is documented in terms of:

- the data groups which it comprises;
- the data item name - the data items contained in each data group;
- comments relating to the data items.

¹ Where aaaa represents any four printable characters but is generally of the form nnnn, and where nnnn represents any four integers. The code is prefixed by a "D" when the data flow is included in the Data Transfer Catalogue (DTC, reference 5) or "P" when it is a Pool owned flow not in the DTC and so defined in the SVA Data Catalogue.

² Flow version numbers are of the form 001, 002, 003 etc.

Where no structure is specified this is noted and a simple list of the data items is given. The data items named are defined in Volume 2 - Data Items (reference 1).

Note that, although it may not always be documented in the BSC procedures, each data flow includes:

- who initiated the data flow;
- who was the intended recipient;
- the time and date the data flow was produced, and/or, the period over which the data is applicable.

Participants are required to populate ALL data items and groups where the data is available and the business reason for sending the flow indicates that the data is relevant to the recipient if it is provided.

2.6. Physical File Specification

This section is included when the data flow is included in a Technical Specification. It documents the actual content and structure of the data flow as defined in one or more of the Technical Specifications for the ELEXON-developed applications. It consists of:

- Record: The identifier and description of a data group where the Technical Specification specifies a data structure (this is generally the case);
- Field Name: The name of a data item as specified within the Technical Specification;
- Comment: Clarification of the use and/ or content of the Field Name;
- Value: Included where the field content is restricted to a specific value or two or more specific alternative values;
- Optionality Indicator: This column is denoted with a 'Yes' where the field is optional within the Group.

2.6.1 General File Principles

All interface files utilise a common structure. These files comprise a number of records, each starting with a three character identifier³ (identifying the record type) and terminating with a line feed character.

The first record of the file will be a header and the last record a footer (each having a specific record type).

The fields contained in each record will depend on the record type, but each record of the same type (in a given file type) will always contain the same set of fields. Each field (including record type) is separated from the next by a separator character.

If a field is optional and not present then no character will be included between the separators or, in the case of the last field, between the last separator and line feed character.

Refer to sections 2.6.2 and 2.6.3 below for a description of the Field Types and File Structures used, and 0 for a definition of the additional data contained within Instruction Files.

³ the general case is three characters, although there is at least one case where the record type is only two characters.

2.6.2 Field Types

All fields that make up the records are written as ASCII data (see 2.6.5 for the defined character set). To determine the format of each field, refer to the logical format attribute of the associated data item in the Data Catalogue Volume 2 (reference 1) and the table below.

Logical Format	Data Type	Format	Example
INT	Integer	ASCII representation, no leading zeros or spaces, leading "-" if negative (no sign if positive)	-1234 12
NUM	Decimal	As for Integer, but with a decimal point and fixed number of decimal digits (including trailing zeros) dependent on precision	-12.34 1.20
CHAR	Text	Left aligned with trailing spaces stripped. Only includes printable characters excluding the separator	The quick fox
DATE	Date	ASCII format as: YYYYMMDD	19961216
TIME	Time	ASCII format as: HHMMSS (24 hour format). Note: both GMT and local time will be used and will be indicated as necessary.	131501
DATETIME	Date/Time	ASCII format as: YYYYMMDDHHMMSS	19961216131501
BOOLEAN	Boolean	One ASCII character: T for True, F for False (uppercase only)	T F
TIMESTAMP	Timestamp		
BITS			

2.6.3 File Structure

All files sent or received by ELEXON-developed systems are structured files. This structure is as follows:

- Header - first record in file - record type = "ZHD"
- Body - other file records
- Footer - last record in file - record type = "ZPT"

Furthermore, the first record of the file "Body" contains header information dependent on whether the file is a data file or an instruction file. The record types for these records are "ZPD" and "ZPI" respectively. Note that the ZPD record is present for all data flows to and from the EAC/AA system regardless of whether they contain data or not. For data flows to and from SVAA and NHHDA the ZPD record is only present when there is actual data present within the record. The market domain data files will always contain a ZPD record.

The components of these four record types are defined in the following tables:

File Header Record: Standard Pool Format

ZHD - File Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZHD
2	File Type	text(8)	5 character flow reference plus 3 character version number
3	From Role Code	text(1)	
4	From Participant Id	text(4)	
5	To Role Code	text(1)	
6	To Participant Id	text(4)	Null if broadcast
7	Creation Time	date/time	Time file processing was started. Specified in GMT.

File Header Record: Pool Transfer Format

ZHD - File Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZHD
2	File Identifier	Text(10)	File identifier - unique within Market Participant
3	File Type	text(8)	5 character type (ranges allocated for DTS, pool or internal use) plus 3 character version
4	From Role Code	text(1)	
5	From Participant Id	text(4)	
6	To Role Code	text(1)	
7	To Participant Id	text(4)	Null if broadcast
8	Creation Time	date/time	Time file processing was started. Specified in GMT.
9	Sending Application Id	Text (5)	Application identifier. For possible future use
10	Receiving Application Id	Text (5)	Application identifier. For possible future use
11	Broadcast	Text (1)	For possible future use.
12	Test data flag	Text (4)	Indicates that this file contains test data.

The additional data in the "Pool Transfer Format" Header Record is as follows:-

Field 2: File Identifier. A 10 character identifier unique within each Gateway. This identifier will be incremented for each physical file presented to the Gateway and will continuously clock-up over time. It will be used by the sender for tracking purposes across the network.

Field 9: Sending Application Id. Used to indicate the sending application system. This field is included for possible future use and (for market start-up) will initially be null.

Field 10: Receiving Application Id. Used to indicate the target application system. This field is included for possible future use and (for market start-up) will initially be null.

Field 11: Broadcast. Reserved for possible future use. Initially (for market start-up), will be null

Field 12: Test Data Flag. A text field containing the following valid set:

- OPER indicates operational data
- TR01 indicates Trialling scenario 1
- TR02 indicates Trialling scenario 2
- TR03 indicates Trialling scenario 3
- TR04 indicates Trialling scenario 4
- TR05 indicates Trialling scenario 5
- TR06 indicates Trialling scenario 6
- TE01 indicates Test 1 data
- TE02 indicates Test 2 data
- TE03 indicates Test 3 data

A null entry prior to live operations should be treated as TR01 (null entry means that there is no data in a field between 2 delimiters);

After the start of live operations then a null or incorrect entry will cause the message to be rejected.

For incoming flows, the flag will be used to assist in the correct routing of information to particular systems.

For outbound flows, the value should be set by the system administrator, which indicates the status of the file or message.

ZPT - File Footer			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZPT
2	Record count	integer(10)	Includes header and footer
3	Checksum	integer(10)	Although type is shown as integer(10) the value is actually a 32-bit unsigned value and hence will fit in an "unsigned long" C variable.

ZPD - Data File Additional Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZPD
2	Settlement Date	date	Optional
3	Settlement Code	text(2)	Optional

ZPD - Data File Additional Header			
4	Run Type Code	text(2)	Optional
5	Run Number	integer(7)	Optional
6	GSP Group	text(2)	Optional

ZPI - Instruction File Additional Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZPI
2	File Sequence Number	integer(6)	

2.6.4 Instruction files

As well as the header and footer records described in the previous section, instruction files contain a number of records for each instruction. The first record for each instruction has a record type of 'ZIN'. This record has the following components:

ZIN - Instruction Header			
Field	Field Name	Type	Comments
1	Record Type	text(3)	= ZIN
2	Instruction Number	integer(12)	
3	Type Code	text(4)	
4	Metering System Id	integer(13)	Optional
5	Market Role	text(1)	Optional
6	Participant Id	text(4)	Optional

2.6.5 Character set

The character set used is based on the ISO Level B character set and includes the following characters:

Letters, upper case	A to Z
Letters, lower case	a to z
Numerals	0 to 9
Space character	
Full stop	.
Comma	,
Hyphen/minus	-
Opening parenthesis	(
Closing parenthesis)
Slash	/
Apostrophe	'
Plus	+
Colon	:
Equals	=
Question mark	?

Exclamation mark	!
Quotation mark	"
Percentage sign	%
Ampersand	&
Asterisk	*
Semi-colon	;
Less than	<
Greater than	>
Underscore	_

Separator: The vertical bar character '|' is used as the separator.

Delimiter: The Carriage Return is used as the delimiter.

2.6.6 Backus-Naur Form (BNF)

This documents the physical structure of the records within the data flow. This section is included when the data flow is included in a Technical Specification or when its physical structure has otherwise been defined. The record structure is expressed in Backus-Naur form (BNF).

The BNF used is a modified form of the standard BNF. A flow structure is defined as follows:

Data Flow Name ::= Flow Structure

The flow structure is further defined using a notation to show single occurrences, iteration, optionality and selection of data groups within the structure:

- An obligatory, single occurrence of a data group is shown by naming the group. This implies that there is always just one occurrence of the data group
- Iteration is shown by enclosing the iterated structure in braces {}, which implies that the data group can occur 0, 1 or many times.
- Optionality is shown by enclosing the optional structure in square brackets []. This implies that a occurrence of the data group may or may not occur.
- Selection is shown by enclosing the set of alternative structures in parenthesis () and separating each alternative with a vertical line |. This implies that one, and only one, of the alternatives will occur.

In order to improve the readability of the BNF definitions the Flow Structure is occasionally further broken out into substructures. These substructures follow the same notation as described above. As a rule of thumb, substructures are used where the level of iterative nesting exceeds two layers, for example:

Data Flow Name ::= { ABC { DEF { GHJ } } }

may be shown as:

Data Flow Name ::= { ABC { DEF_set } }

DEF_set ::= DEF { GHJ }

3. INSTRUCTION PROCESSING SPECIFICATION

3.1. NHH Instruction Processing

The full details of the specification of non half hourly instruction processing is found at reference 6. The following text and associated diagram give an overview of non half hourly instruction processing.

3.1.1. Instruction File Processing

Figure 1 NHH Instruction Processing shows the interactions between the NHHDA and SMRS or the NHHDC for the sequence that is followed when the NHHDA processes instruction files, and the instructions contained in them, received from either source.

The NHHDA shall determine the cause of file failures in conjunction with the source. Failures due to the NHHDA shall be resolved by the NHHDA. Where the instruction file validation failure is due to transmission, the NHHDA shall request a resend. Where it is due to the source, the NHHDA shall request a refresh file.

3.1.2. Reporting of Failed Instructions

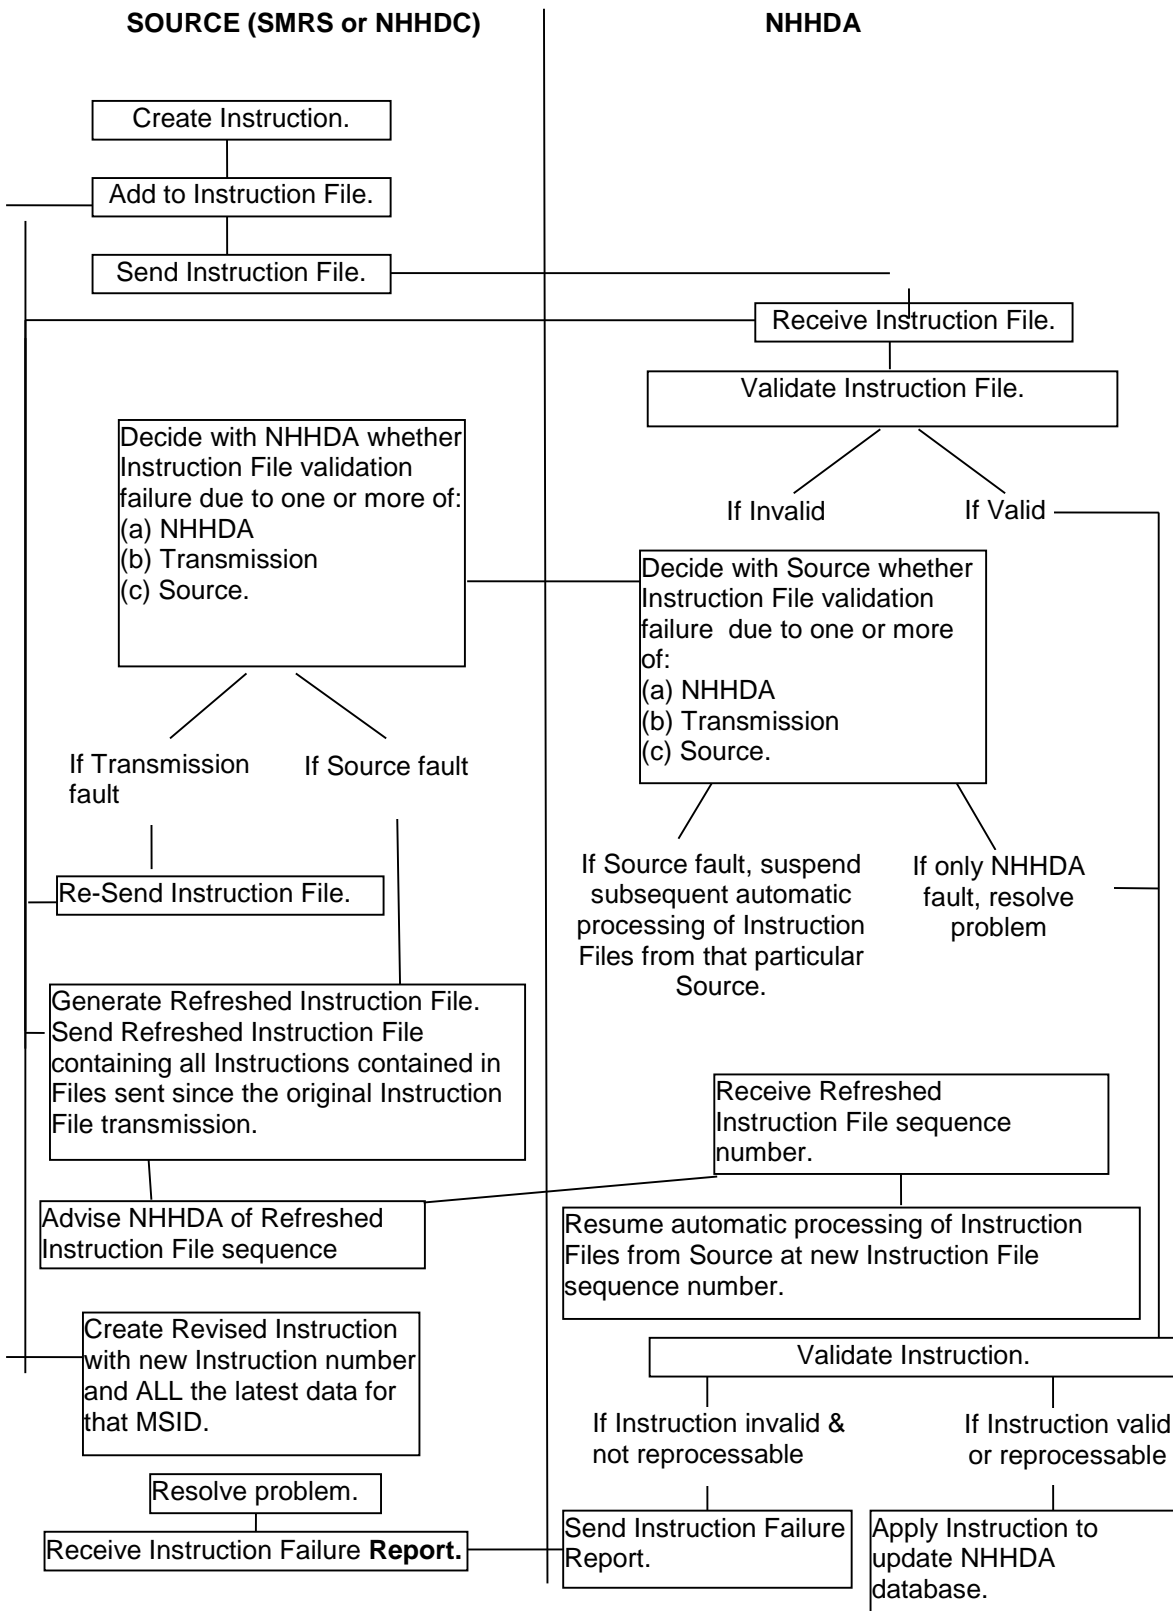

Where one or more instructions have failed, the NHHDA shall compile and send a file of the failed instructions with reasons for failure to the source and request a refresh.

3.1.3. Problem Log

The NHHDA shall set up, utilise and maintain a problem log for the management of failed and discarded instructions. The log shall hold the information about the latest instructions that are in a failed or discarded state.

The NHHDA shall record in the problem log the reasons for failure of failed instructions, the date and time of the latest processing attempt, mark the instructions to be resolved by the NHHDA and those that have been resolved by the NHHDA. The NHHDA shall, for each resolved instruction failure, record the corrective action taken in the problem log.

Figure 1 NHH Instruction Processing

3.2. HH Instruction Processing

The full details of the specification of half hourly instruction processing is found at reference 7.

3.3. Multiple BM Unit Instruction Processing

The full details of the specification of Multiple BM Unit instruction processing is found at reference 8.

APPENDIX A - Data Interface Index

Record Count
Checksum

Backus-Naur Format (BNF):

BM Unit Disconnected Supplier Take Energy Volume Data File ::= ZHD ZP2 RDT HD2 {GSP_set} ZPT
 GSP_set ::= GS6 {SUP_set}
 SUP_set ::= SU4 {BM4 {BDD}}

<u>Record:</u>	<u>order on:</u>	<u>order:</u>
BDD	Settlement Period Id	Ascending
BM4	BM Unit Id	Ascending
GS6	GSP Group Id	Ascending
SU4	Supplier Id	Ascending

Note: the above list shows the order of records at each level within the BNF structure. It should be read in conjunction with the BNF structure and not as a simple list of the sort order.

Notes:

1. The file will include only those BM Units to which the SVA Run attributes an energy volume.
2. The BM Unit Disconnected Supplier Take Energy Volume Data File is output in ascending order by GSP Group, Supplier Id, BM Unit Identifier and Settlement Period Id.
3. The BM Unit Disconnected Supplier Take Energy Volume Data File is specified in Pool Transfer File Format and will be changed to Pool File Format before processing by Stage 2. Pool Transfer File Format (PTFF) is defined in Section 2.6.3 of the SVA Data Catalogue.

Notes:

BM Unit Registration Data File

P0181

002

1. The file contains all Stage 2 BM Units registered in the CRA at the time that the file is generated. It will report historic data for a BM Unit in addition to current and future data.
2. The BM Unit Registration Data File will contain at least one GSP Group Record.
3. The BM Unit Registration Data File will contain at least one BMU record for every SUP record.
4. The BM Unit Registration Data File is specified in Pool Transfer File Format and will be changed to Pool File Format before processing by Stage 2. Pool Transfer File Format (PTFF) is defined in Section 2.6.3 of the SVA Data Catalogue.
5. The BM Unit Registration Data File will always consist of the complete set of BM Unit/GSP Group/Supplier relationships from the CRA database, and will be sent whenever there is a change. A change is determined to have happened if the flow generated is not the same as the previously generated flow (generally the flow generated on the previous day).
6. The BM Unit Registration Data File will summarise contiguous BM Unit effective date ranges as a single record in the flow with an Effective From Date equal to that of the earliest record in the contiguous block, and an Effective To Date equal to that of the latest (this may be null for open ended records).

Disconnected Non-BM STOR MPANs

P0241

001

Backus-Naur Format (BNF):

Notes:

This file should be sent as a pipe delimited file.

The Start/End Date and Time in the P0241 reflect the start and end of the Demand Control Event, not intermediary actions within an event. Therefore, the Transmission Company should report all demand side Non-BM STOR and DSBR MSIDs affected by the same event in the same file, irrespective of whether MSIDs are disconnected and reconnected multiple times within the same event.

Version History:

Catalogue release change takes effect	Mod/CP No.	Brief description of the change and its reason

GSP Group Take Data File

P0012

001

Checksum

Backus-Naur Format (BNF):

GSP Group Take Data File ::= ZHD ZPD HDR ((GSP){GS2}) ZPT

<u>Record:</u>	<u>order on:</u>	<u>order:</u>
GS2	Settlement Period Id	Ascending
GSP	Settlement Period Id	Ascending

Note: the above list shows the order of records at each level within the BNF structure. It should be read in conjunction with the BNF structure and not as a simple list of the sort order.

Notes:

1. For post-NETA days the P0012 flow will be received from CDCA.
2. For pre- NETA days the P0012 flow will be received from SAA.
3. Under NETA the HDR group is no longer needed. The decision to leave the group in place was taken so as to minimise changes to SVAA at that time.
4. The GS2 record is only used in flows sent by the CDCA.
5. Each "set" of P0012 files sent by the CDCA is identified by a unique Settlement Date, CDCA Set Number and CDCA Extract Number (always zero)
6. A complete set of P0012 files sent by the CDCA (1 per GSP Group) is required for each Volume Allocation and Reconciliation Volume Allocation Run.
7. The set of P0012 files received from the CDCA for each Volume Allocation and Reconciliation Volume Allocation Run should all have the same CDCA Set number.
8. The GSP Group Take Data File is output in ascending order by Settlement Period Id.

		Profile Class Id	
MSD	Metering Systems	Record Code	MSD
		Metering System Id	
ZPT	File Footer	Record Code	ZPT
		Record Count	
		Checksum	

Backus-Naur Format (BNF):

MSIDs affected by Demand Control Event ::= DCE {PCD {MSD}}

Notes:

The P0238 contains details of all MSIDs disconnected by the LDSO, i.e. for a single Demand Control Event, a single P0238 is sent by the LDSO, ultimately, to all DCs and DAs.

Whilst the P0238 is sent by the LDSO to the BSCCo, it should be generated as though it is to be sent direct to Party Agents, i.e. the 'MPID To' in the header should reflect the various agents that are intended to receive the file.

The 'Start Date and Time' and 'End Date and Time' in the P0238 reflect the start and end of the entire Demand Control Event, not intermediary stages or actions within an event. Therefore, the LDSO should report all MSIDs affected by the same event once between the Start and End Date and Time that represent the beginning and end of the whole event,

MSIDs affected by Demand Control Event

P0238

001

Notes:

irrespective of whether the LDSO disconnects and reconnects MSIDs multiple times within the same event.

TUoS Report (HH/NHH Split)

P0210

002

Backus-Naur Format (BNF):

Record:	order on:	order:
HHB	Settlement Period Id	Ascending
MCL	Measurement Class Id	Ascending
SPX	Settlement Period Id	Ascending
SUP	Supplier Id	Ascending

Note: the above list shows the order of records at each level within the BNF structure. It should be read in conjunction with the BNF structure and not as a simple list of the sort order.

Notes:

1 The item 'GSP Group Take Report Value' is called 'GSP Group Take' in the SVAA Technical Specification. This variant was added to distinguish between the use of lengths NUM(13,3) and NUM (14,4) for this item.

2 The item 'Period Supplier Deemed Take Report Value' is called 'Period Supplier Deemed Take' in the SVAA Technical Specification. This variant was added to distinguish between the use of lengths NUM(13,3) and NUM (14,4) for this item.

3 For the avoidance of doubt, the SPX, TOT, HHA and TO2 groups contain net HH and NHH metered data, whereas the MCL, HHB and TO3 groups contain gross import and gross export HH metered data only. Consequently, only HH Measurement Class Ids are reported in the MCL group and HH metered data in the subsidiary groups. Therefore, it is possible that no MCL group is included if only NHH data is applicable.

4 As part of the implementation of P348/P349, the 'BMU Gross HH Demand' and 'BMU Gross HH Embedded Export' items in the HHB and TO3 groups are reported with nil/zero values (specifically '0.0000') in cases where SVAA would ordinarily output a null value due to there being no volume allocated for that specific combination of BM Unit and Measurement Class.

Version History:

Catalogue release change takes effect	Mod/CP No.	Brief description of the change and its reason
7.0	P91	Extension to data provided to the transmission company in the TUoS report
47.0	P348/349	Inclusion of new groups and data items to enable the reporting of gross import and exports to support the implementation of CUSC Modification Proposals CMP264/265
